MICROFILM CORR

Methylene Blue
Analysis

Customer Name: Micor IncAddress: 100 Claremont Ave. Bensalem, Pa. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than ($<$) 1.4 μ g (micrograms) indicate archival quality, and greater than ($>$) 1.4 μ g indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD ($<$) 1.4 μ g	DOES NOT MEET ANSI STANDARD ($>$) 1.4 μ g
MARKING: Buscua 8/19/91	.19	✓	

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 μ g for residual thiosulfate.

A close-up of a document showing a grid of numbers. The numbers are arranged in a 3x3 grid, with the top row containing 1, 2, 3, the middle row containing 4, 5, 6, and the bottom row containing 7, 8, 9. To the left of the grid, there is a small graphic element consisting of a series of horizontal lines of varying lengths, resembling a barcode or a decorative element. Below the grid, the number 20 is visible.

BRIDE

A close-up photograph of a document featuring a grid of numbers and letters. The visible elements include the letters 'E' and 'F' in the top row, and the numbers '20', '22', '24', and '26' in the bottom row. The document appears to be part of a larger set of materials, possibly related to a forensic investigation as suggested by the caption.

<i>Ne</i>							

A close-up photograph of a document featuring a grid of numbers. The visible numbers include "0000000000" at the top, followed by "16", "22", and "20". The numbers are arranged in a way that suggests they might be part of a larger table or form.

A close-up photograph of a white rectangular label with black markings. The label features a series of vertical bars of varying heights at the top, resembling a barcode or a specific identification code. Below these bars are several rows of numbers. The visible numbers include "20", "22", "24", and "26". The label is slightly tilted and appears to be attached to a light-colored surface.

ELLS SINCE 1939
MICROFILM CORR.

Methylene Blue
Analysis

Customer Name: Micor Inc.
Address: 800 Claremont Ave. Bensalem, Pa. 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than ($<$) 1.4 μ g (micrograms) indicate archival quality, and greater than ($>$) 1.4 μ g indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks.

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD (\leq) 1.4 μ g	DOES NOT MEET ANSI STANDARD ($>$) 1.4 μ g
MARKING Bureau 8/29/91	.19	✓	

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 μ g for residual thiosulfate.
